

Lunarfins Scuba Club

July 21st — Valera Sakhuenke

Valera Sakhnenko - A Canadian underwater cinematographer and explorer, Valera captures the profound and often-hidden stories of the deep. Through his YouTube channel, Diver's Lens, he blends an adventurous spirit with a meticulous eye for detail, documenting the striking beauty and complex survival of our oceans. Valera's filmmaking goes beyond a visual record; it is an invitation to witness the silent dramas of the reef and the intricate cycles of life that sustain it. By sharing these intimate moments of nature's resilience, he aims to inspire a deeper connection to our fragile underwater ecosystems and a collective commitment to their protection.

The Tiny Wonders of Anilao" takes you into the hidden, magical world beneath the surface—where tiny creatures, many smaller than a grain of rice, dazzle with color, behavior, and mystery. From rare nudibranchs to camouflaged critters, the rich macro life of Anilao is not only beautiful but also vital to the health of the entire ocean. By showing their fragile beauty, this film is a quiet call to protect marine life—because when the small things disappear, the big things soon follow.

Lunarfin's President's Notes

Hello my Lunarfin's family,

I hope everyone is having a great summer and getting some travel, diving and family time in. Thank you Jessica Lee for your June presentation and bringing us up to speed on the progress of the SS United States and all the great information on the diving opportunities in the Destin, Ft. Walton Beach Florida. I am looking forward to making a trip over there to spend some quality time with Jess, Jeff and the mother ocean. We have been discussing a club trip to dive the SS United States when she is in her final resting place.

We had a good turnout for the meeting; it was bit of a rough start when yours truly realized that I did not bring the laptop. Fortunately, Felix was very resourceful and managed to start the meeting with a cell phone. (thank you, Felix, you are awesome).

The checkout dive at Thunder Bay - Mammoth Lake was great. It was windy enough to keep the temperature comfortable topside, the water was warm and vis was around 15 feet. We had quite a few members from CHUM that joined us. Thank you, Alex (V.P.) and Scott Leonard, for promoting it at CHUM, we made some new friends and visited with old friends. Our goal is to bring everyone together so we can get to know each other better, have more dive buddies, create more opportunities for people to dive and expand our sport along with promoting Marine Conservation. The mother ocean needs all the help she can get.

Please welcome our friends and newest members Adam Hems and Ken Tamberg to the club. I have known them for a few years, and they are very active in diving and the diving community.

I hope you can join us on July 21st at Spring Creek BBQ for a presentation from Valera Sakhuenke on Anilao. If you cannot attend in person we will also be on zoom.

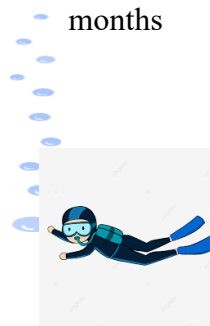

Our next diving event will be Kirk's famous underwater scuba poker on August 30 at Mammoth mark your calendar and come out to dive and visit.

Remember practice makes perfect or at least it helps make for better divers. I am still posting any dive opportunities on Facebook each month and anyone is welcome to come out, I have been making new friends and finding great dive buddies from all over. We have a new buddy from this Saturdays dives and she drives all the way down from Porter.

Please welcome Jessica L Polito, she is an EMT-P, CC-P, Jessica has only been diving a few months and already has over 70 dives.

Keep your fins up and your kit wet.

Brion Saathoff ><::>

Happy Birthday to you!
May your day be filled with Happiness.

Ja Van Pruett Dwire — July 5th

Pat Davis — July 21st

Julie Leissner — July 30th

Lunarfin's Raffle — Let's Make Some Money

Lunarfin's will be offering raffle items at meetings. Tickets will be very reasonable and the items raffled off will be interesting and worth having. Cathy Strahan, Ja Van Pruett Dwire and Dennis Deavenport have regularly donated for the Raffle.

Each month will have at least one item to pick from and you will not know until you come and see what is being offered... Bring a little *Mad Money* to the meeting to help Lunarfins earn money for social events. If you have something you would like to donate please contact JaVan Pruett at <caladyfish@gmail.com>, she would love to hear from you.

About our Members

Paul Cater Deaton

The ocean has never been in such peril as it is today. This means that the planet, and our own survival, are also at risk. If there is no blue, there is no green. If we don't get a handle on this very soon, it's game over. So do something - anything - no matter how small. It's better than nothing. Individually, we are but a drop in the ocean. Together, we ARE the ocean.

June 10, 2026-This morning, I had the honor of being dockside to help Elissa set sail to represent Galveston at America's 250th birthday party. Follow them at [Galveston 250](#).

About our Members

Paul Cater Deaton (Continued)

Galveston is so cool. I shot the fireworks over Battleship Texas last night. The wonderful folks at Historic Galveston Seaport were kind enough to invite me to shoot the event from their vantage point. Then today, NBC had our beautiful Elissa on for almost five minutes during their coverage of Sail 4th 250. They got some outstanding shots of her with NYC in the background and reported that, at just under 150 years of age, she was the oldest tall ship at the event. This is proud moment for the [Galveston Historical Foundation](#) and our city on this quirky little island. Happy 4th, everyone.

About our Members

Dennis Deavenport

Here we are, diving somewhere in Raja Ampat, Indonesia on the KLM Mari. Only 8 on the boat so lots of freedom to move around.

About our Members

Janavi Mahimtura Folmsbee (Artist)

The ripple effect of art!!!! [#Arrived](#) at the gallery on the closing weekend of MAGIC WATER expecting an ordinary afternoon and instead walked into one of the most meaningful moments of the exhibition.

A group of recent college graduates had gathered with sketchbooks and tablets in hand, spending hours with the work.

Years of scuba diving, marine research, and time spent listening to the ocean have shaped my practice. To witness these underwater worlds touch others in ways I could never have imagined was deeply moving.

The greatest gift an artist can receive is knowing that something they created had the power to inspire, to create real change, to shift perspective, to spark curiosity, or to leave a lasting impact on another person.

Art matters because it has the ability to move us. And when we are moved, we pay attention. We care. We imagine new possibilities. I left feeling both touched and inspired.

Scroll to see the artworks that resonated with these artists and the beautiful ways they responded.

About our Members

Cindy Rueland

Cindy and I enjoyed breakfast with space shuttle astronaut Steve Hawley today, 6/20/26, at ShuttleFest V in Cocoa Beach, FL.

Steve operated the space shuttle robot arm to deploy the Hubble Space Telescope in 1990, while I supported the mission in Mission Control Center Houston.

About our Members

Brion Saathoff

Micah Makenna and I had a great time Saturday. We started with a tour of the hyperbaric chamber that Moody Gardens just acquired (The other people in the picture are our dive safety officers.) Then we spent the rest of the day at the steampunk festival. Micah did not want to dress up but once we got there, he decided we would all go steampunk next year. There are a lot of great events in Galveston year-round.

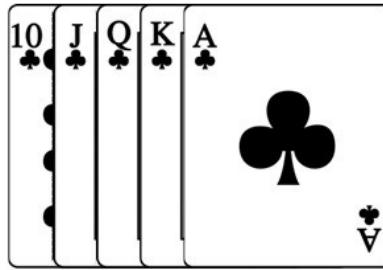

About our Members

Cathy Strahan

Pretty fun going down to Galveston beach a few days after some big storms! Love driving on the beach, I had to dodge some big pieces of driftwood but there was lots of it that washed up on shore and some creative folks making things on the beach with it.

Study Tracks Fish Movements for Better Fisheries Management

Scientists are working to understand how fish use the banks and reefs of Flower Garden Banks National Marine Sanctuary, located 80 to 125 miles off the coasts of Texas and Louisiana. Current information is sparse, compromising efforts to effectively protect habitats that many fish, including commercially valuable species, depend on for their survival.

The researchers developed a [video](#) that describes how they are using acoustic technology to track fish movements and study fish behavior. The video also shares some of the team's findings to date. For example, the invasive red lionfish, gray snapper, and graysby all use the same habitat but at different times of the day, which may help decrease competition for important resources.

Understanding how and when fish use different habitats is critical to informing management decisions. Project findings will help sanctuary managers design and implement measures that help protect commercial and recreational fisheries in the region.

The [project](#) is funded by NCCOS and led by Texas A&M University. The video was produced by collaborators at Mississippi State University's Marine Fish Ecology group.

WORLD-FIRST CATCH: NEW SHARK SPECIES

Sent in by Brion Saathoff

A night dive to study wild sharks that can walk on land has surfaced with something even more rare – a species unknown to science.

“New shark species don’t come along that often, and it’s most definitely the first one named after me,” said a surprised Dr Christine Dudgeon of the University of the Sunshine Coast about the metre-long specimen she caught by hand and carefully guided back to the study boat.

Now officially called Dudgeon’s Walking Shark (*Hemiscyllium dudgeonae*), the nocturnal species found only in a tiny area off southeastern Papua New Guinea (PNG) was scientifically confirmed in a collaborative paper published overnight in an international journal. The UniSC-led research team was working in Milne Bay and nearby shallow waters last year to examine numbers of endangered epaulette sharks.

The sharks, which eat invertebrates off the sea floor and are not dangerous to humans, are famous for using all four fins as limbs to amble across reef flats at low tide. While a related species in the Great Barrier Reef is relatively well studied, the global team focused on understanding the distribution of – and threats to – PNG epaulettes endemic to the tropical waters north of Australia.

UniSC PhD student Jess Blakeway, lead author of the paper, was first to see the specimen in the boat’s lights as it was brought in by her supervisor, Senior Research Fellow Dr Dudgeon.

“Straight away I recognised that the colour pattern was different from any of the other species I had worked with before,” Ms Blakeway said. “The first thing that stood out was the white dashes along its brown body. These dashes were quite different to the leopard-like spots we were expecting.

“We put it in a tub with fresh seawater to give us time for measuring and blood and tissue sampling, and over the next two nights found another 11 individuals with the same patterning.

“It wasn’t until genetic analysis of the samples back in Australia that we could confirm a new species. It’s exciting because this is the first new species described for the genus since 2013.” *H. dudgeonae* was named after renowned elasmobranch geneticist and ecologist Dr Dudgeon, who has researched the genus (group of species) for more than two decades. The new species’ local name is kadedekedewa, which loosely translates to dog shark or lazy shark due to its slow, four-limbed gait.

The findings immediately raised concerns about the new shark’s vulnerability due to its restricted home range, habitat degradation, fishing activity and climate change.

“We hope to collect more data on our next research trip in October to help the International Union for Conservation of Nature (IUCN) Red List assess the species as vulnerable or endangered with extinction,” Ms Blakeway said. The research also revealed new information about the geographic distribution of two other epaulette species off the island of New Guinea.

Survey methods included diving, snorkeling and reef walking to catch walking sharks by hand, with 70 dedicated surveys completed at 35 sites in 15 locations.

Co-authors included PhD supervisors Professor Kathy Townsend of UniSC and Dr Mark Erdmann of Rewild and the California Academy of Sciences, and collaborators Dr Gerald Allen of the Western Australian Museum and Conservation International, Max Teliwa of PNG’s Milne Bay Provincial Fisheries, Julie Waranaka of the University of Papua New Guinea, and William Brooks of San Francisco.

Ms Blakeway said the research also changed the understanding of where walking sharks can be found. “Previously, it was thought that each species had distinct habitat barriers such as rivers or deep water. Now we know that distributions in eastern PNG overlap, though species do not co-occur.

“The new species is the 10th in the PNG epaulette genus (group of species). Five are already listed as threatened with extinction on the IUCN Red List under criterion B (which relates to their restricted geographic range) – a criterion that only applies to three percent of all sharks.”

The research received funding from Conservation International (WM Brooks grants), Australia Pacific Science Foundation, Shark Foundation and the VanDyson Marine Fund.

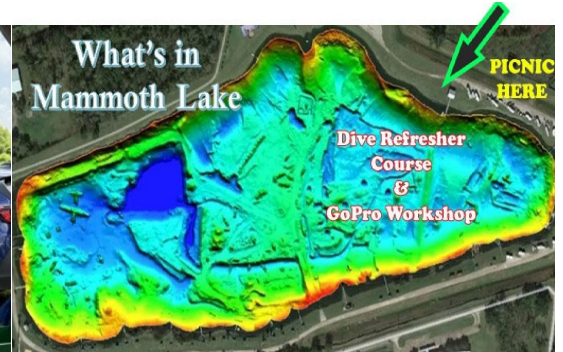

You should have been there!!

National Ocean Service, NOAA

2026 Get Into Your Sanctuary Photo Contest

Celebrate the beauty, wonder, and diversity of America's national marine sanctuaries through your lens!

NOAA's Office of National Marine Sanctuaries is opening the 2026 *Get Into Your Sanctuary* Photo Contest, inviting photographers, divers, boaters, surfers, paddlers, beachgoers, students, scientists, and coastal communities to share images from national marine sanctuaries and other ocean and Great Lakes places.

This year's contest introduces four new categories. The photo contest runs through Labor Day, September 7, 2026, making it a great summer opportunity for anyone exploring the coast, Great Lakes, or national marine sanctuaries to share their perspective.

Show the world what the ocean and Great Lakes mean to you.

- **Life in Motion** challenges photographers to capture natural wildlife behavior, from feeding and hunting to schooling, caregiving, and symbiotic relationships.
- **Sanctuaries and You** highlights the ways people experience sanctuaries through diving, boating, paddling, research, education, and everyday moments on or near the water.
- **The Water's Edge** explores the boundary where land and sea meet, including shorelines, tidepools, coastal landscapes, and split-level perspectives.
- **Ripples From the Past** focuses on maritime heritage, including shipwrecks, aircraft, lighthouses, historic bridges, and cultural landmarks.

Winning photographs will be announced in October 2026. Winning photos reveal a moment of connection, behavior, or wonder in a way that feels both visually compelling and authentic to the natural world. As you prepare your entry, keep these qualities in mind. Here's what our judges are looking for:

- Strong composition and lighting
 - Unique perspective or subject
 - Storytelling or emotional impact
- Adherence to [responsible photography](#) practices

American Charitable Watersport Activities Foundation

2026 Supporter Registration

The “American Charitable Watersport Activities Foundation” (ACWA) was established by SCUBA divers on March 31, 2023. ACWA is recognized by the IRS as a 501(c)(3) public non-profit charity. Staffed by non-paid volunteers, ACWA’s administrative and donation support is provided annually by members of our community.

Supporter Registration for the “American Charitable Watersport Activities Foundation” (ACWA) is open to Dive Clubs and Individuals who reside in the United States of America. 2026 registration is \$20.

ACWA’s Donation Committee optional targets for 2026:

o Sea Camp Scholarships

o Houston Underwater Film Festival – Pay discounted ticket costs for Marine Biology or Film Study students to attend. Donation would go to cover the MATCH theater portion of each ticket, HUFF would no charge their portion of each ticket.

o Adaptable

o Turtle Conservation

New “Supporters” need to complete this form to provide ACWA with contact and IRS reporting information. To join as an individual (must be a certified scuba diver, or a member of a dive club) - fill out the application below. Please print legibly as e-mail addresses will be utilized to keep supporters abreast with the charity’s status and your name as identified below, used in any future donation reporting required by you or the IRS.

**You should have
been at June General Meeting
--It was Awesome!
Thank you! Jessica Lee**

The Lunarfins Scuba Club was organized in 1963 by a small group of divers who worked at the Manned Spacecraft Center, as Johnson Space Center (JSC) was known back then. The club grew primarily through the sponsorship of SCUBA training classes, local dive trips and social activities. Since that time, membership has broadened to include anyone interested in diving. The majority of our members are in some way affiliated with NASA but this is not a requirement for membership and we have members from all across the board.

Diving Community Lost Another Good Guy

Don Reece Obituary

Sent in by Billie Williams

February 1, 1942 - June 14, 2026

Celebration of Life will be held on June 30, 2026, at 11:00 a.m. at First Baptist Church of White Settlement.

Visitation will be one hour before the service.

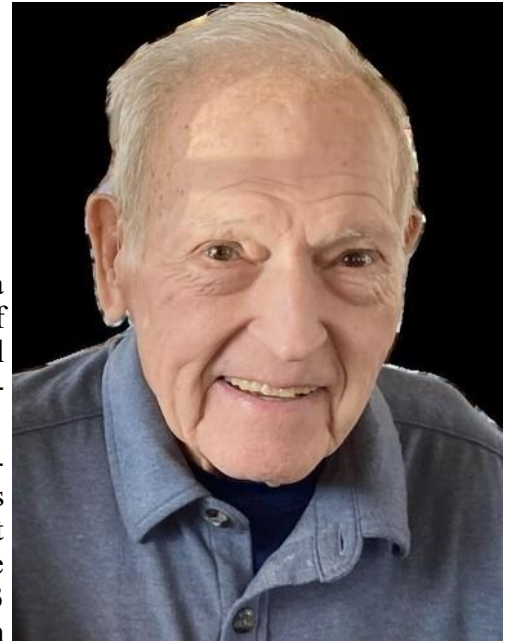

In lieu of flowers the family respectfully request to please make a donation to a charity of your choice or to the First Baptist Church of White Settlement. For those who are unable to attend, the memorial service will be live-streamed on The First Baptist Church White Settlement Facebook page at facebook.com/FirstBaptistW-STX/.

Don graduated from Brewer High School in 1960 and attended Weatherford College before graduating from the University of Corpus Christi with a Bachelor of Arts degree in Marine Biology in 1966. It was in Corpus Christi where his passion for SCUBA and the Big Blue was ignited. After graduation, he taught at Monnig Middle School for 3 years. Don then opened Scuba School of Fort Worth which he ran alongside his college sweetheart Bessie. Don taught many generations to SCUBA dive. After more than five decades of business, he and Bessie decided to retire in 2020 to spend more time with family and go traveling.

Don will be remembered for generous spirit, strength to persevere. If you asked Don how he was doing, invariably the answer was "I'm awesome", and he was. His true calling in life was being a teacher, which he did every day of his life. Whether it was middle schoolers, divers, members of his Sunday school class, friends or family, he was driven to share his knowledge, wisdom and philosophy to make the world a better place for others.

He enjoyed rooting for his Brewer Bears football team, watching college football, teaching Sunday School and sending positive and encouraging thoughts to friends and family.

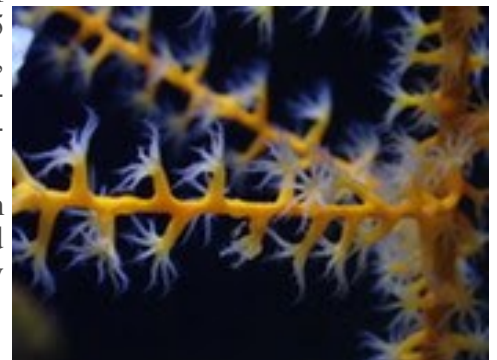

Don is survived by wife, Bessie; children, Kelley Reece and wife, Megan, Kerri Favor and husband, Joel; grandchildren, River Reece and Ruby Reece; his niece, Rachel Houston; many cousins and countless friends; and his loyal pup, Tita.

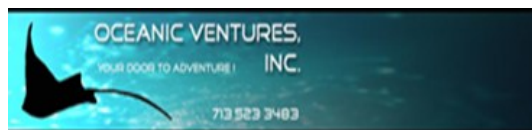

[NOAA's National Coral Reef Monitoring Program story map](#)

This comprehensive story map highlights NOAA's National Coral Reef Monitoring Program and captures their journey through the 2024-25 monitoring surveys in Flower Garden Banks National Marine Sanctuary, Florida, U.S. Virgin Islands, and Puerto Rico. Data from these monitoring efforts help inform coral reef management, conservation, and restoration practices.

This [story map](#) visually narrates NOAA's coral reef monitoring efforts in the Atlantic and Caribbean, highlighting the team behind the work and the ecosystems they study. It showcases why these reefs matter and how monitoring supports the protection of these vital marine habitats.
